SUMMARY

Data science and machine learning professional with a software engineering foundation across **predictive modeling, statistical analysis, ETL, MLOps, NLP, cloud pipelines, APIs, and full-stack ML applications**. Northwestern M.S. in Data Science (4.0/4.0) and ASU B.S. in Computer Science (3.86/4.0). Hands-on with **Python, SQL, AWS, XGBoost, scikit-learn, MLflow, Tableau, FastAPI, React, Kafka, and Docker** to build validated data products, model services, monitoring workflows, and decision systems.

EDUCATION

Northwestern University

M.S. in Data Science, Artificial Intelligence Specialization

Aug 2025 - Aug 2026

Evanston, IL | GPA: 4.0/4.0

Arizona State University

B.S. in Computer Science; Business Minor

Aug 2021 - May 2025

Tempe, AZ | GPA: 3.86/4.0

TECHNICAL SKILLS

Programming & Query Languages: Python, SQL, R, JavaScript/TypeScript, PostgreSQL, DuckDB

ML / Data Science: scikit-learn, XGBoost, LightGBM, NLP, feature engineering, statistical modeling, cross-validation, pandas, NumPy, MLflow, model monitoring

Cloud / Analytics / Software: AWS, Tableau, Power BI, Streamlit, FastAPI, React, REST APIs, Kafka, Redis, Docker, Git/GitHub Actions, Vercel, Railway, ETL, data modeling, API testing

PROFESSIONAL EXPERIENCE

Machine Learning Engineer

Jun 2026 - Aug 2026

Kaufman Hall

Miami, FL (Remote)

- Developed **Python and SQL data models** and reusable feature workflows for ML use cases, adding validation checks and versioned transformations to keep model inputs consistent and analysis-ready.
- Applied **MLOps** practices across experiment tracking, model evaluation, packaging, deployment handoff, and monitoring documentation to support reproducible ML releases.
- Translated analytics requirements into **model-ready features, validation criteria, and documented data contracts** so experiments and downstream scoring workflows used consistent definitions across releases.

ML Engineer, Part-time

Aug 2025 - May 2026

Machine Learning Engineer Intern

Jul 2024 - Jul 2025

6sense

Remote / Bengaluru, India

- Built and evaluated **AWS-based NLP and ML workflows** spanning data preparation, feature engineering, model training, validation, and inference, with emphasis on reproducible experimentation and deployment readiness.
- Improved production reliability through **data-quality checks, model-performance analysis, issue triage, and technical documentation** while collaborating across engineering and analytics workflows.
- Automated repeatable **Python/AWS training and inference workflows**, tracked edge cases and model outputs, and supported the transition of NLP experiments into deployment-ready engineering workflows.

Undergraduate Teaching Assistant

Aug 2023 - Aug 2024

Arizona State University

Tempe, AZ

- Supported **CSE 310 and CSE 355** through office hours, grading, assignment guidance, and one-on-one instruction on algorithms, data structures, and core computer science concepts.
- Reviewed assignments and explained **algorithmic complexity, graph algorithms, trees, hashing, and automata concepts** to help students translate theory into correct implementations.
- Created **debugging examples, test cases, and rubric-based feedback** that helped students isolate implementation errors, reason about edge cases, and improve code correctness and clarity.

Software Engineer Intern

May 2022 - Aug 2022

Electro-Active Technologies Inc.

Tennessee, United States

- Translated monitoring needs across **12 real-time sensors and 1M+ readings/day** into data fields, validation rules, alert conditions, and reporting requirements.
- Built **AWS and SQL pipelines and API workflows** that validated telemetry, flagged malformed records, and reduced weekly manual data checks by **40%**; tested releases and documented failure cases.
- Tested **API and pipeline changes** before release, documented expected behavior and known issues, and created reporting views that helped engineers trace performance problems to affected processes or sensors.

PROJECTS

Chicago Curbside Decision Lab | Python, XGBoost, Tableau, Streamlit | [Tableau](#)

- Engineered a city-scale curbside risk dataset from **496,575 validated 311 records and 58.8M traffic observations** for spatial decision analytics; trained spatially held-out **XGBoost** to **85.7% ROC AUC and 81.5% balanced accuracy**.

Quantitative Trading Analysis Dashboard | Python, Streamlit, pandas, yFinance | [Live](#)

- Developed a quantitative research platform for market ingestion, momentum and mean-reversion strategies, reusable backtesting, **Value-at-Risk, Sharpe ratio, win rate, and drawdown** analytics.

US Private Capital Intelligence | Python, PostgreSQL, SQL, Tableau, SEC/FRED | [Tableau](#) | [Live](#)

- Built an **SEC Form D analytics pipeline across 359,448 filings and \$7.5T in reported capital**, automating Python ETL into PostgreSQL and joining FRED data for advanced SQL and interactive funding-market analysis.

Patient360 NU | React, Vite, Python, CPIC, openFDA, RxNav, Railway | [Live](#)

- Built a governed multi-source healthcare application integrating **four healthcare APIs** with business rules, validation, exception handling, audit logging, consent controls, reconciliation checks, and tested failure states.

RA Flare Sentinel | React, FastAPI, Kafka, DuckDB, MLflow, Docker | [Live](#)

- Developed a real-time ML decision-support application with **FastAPI, Kafka, MLflow, model monitoring, API validation, automated tests, and data-quality checks**, converting model outputs into operational dashboards and thresholds.
